### **DETAILED ACTION**

1. In the request for filing a continuation application dated 2/11/00 and of which is a copy submitted to the Office on January 3, 2001, there includes a statement to cancel claims 1-7 and 11. It is noted however that claim 11 is not present in the instant application. Accordingly, claims 1-7 are canceled and claims 8-10 are pending.

#### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 8-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Thamm et al. (US Patent No. 5,249,289) considered with Nishimura et al (US Patent No. 5,913,912).

As per claims 8-10, Thamm et al discloses a system and method for rebuilding edited audio files. Note the abstract. The system comprises the means and steps of storing, retrieving, sorting, articulating, determining and verifying signals and audio information. Note column 7, line 13 to column 9, line 49. The difference between the claimed invention and the teaching of Thamm et al is that Thamm et al does not specify the kind of data being used is flight

information. It is well known in the art of flight information systems that flight information are usually broadcasted to passengers or flight attendees.

Nishimura et al discloses a flight strips management method and system. Data regarding flights are gathered and stored in memory for later transmission to an aircraft or passengers via radio frequency. Note column 13, lines 3-29 of Nishimura et al. Terminating an end program sequence termination request would have been obvious to one of ordinary skill in the art in order to stop broadcasting a message when a flight status has been changed. It would have been obvious to one of ordinary skill in the art at the time the invention was made to combine Nishimura et al with Thamm et al in order to broadcast flight data to passengers with the motivation of providing a sequence of flight data to potential attendees or passengers as necessary due to providing flight information or flight updates.
